

BGN productores de Metales

a: Ideally the choice of treatment should be guided by appropriate susceptibility testing results. According to current resistance trends of resistance to the novel beta-lactams, this is particularly relevant in the case of aztreonam/avibactam for NDM-producing Gram-negative bacilli and for all MBL-producing *P. aeruginosa*

b: Combinado con aminoglucósidos en ITUci

c Combined: The combination could depend on the source of infection; recommended in VAP/HAP, BSI, cIAI and cUTI.

d: Evitar le uso de Cefiderocol de forma empírica en las enterobacteriales productores de metales tipo NDM.

STENOTROPHOMONAS
